

Dear Patient,

As a valued patient in our dental practice, I wanted to share with you an exciting new technology our practice is offering that can transform your dental experience: Waterlase Dentistry.

Our practice has seen an increased number of patients looking for a faster, more precise alternative to the traditional needle and drill. In a continuing effort to provide you with the best oral health care and advanced treatment options, our office is now performing many traditional dental procedures with the best dental laser system available – the revolutionary Waterlase MD™.

Unlike needle and drill dentistry, the Waterlase MD™ can perform many traditional dental procedures with fewer shots, less anesthesia, and in many cases, without pain. Waterlase uses a unique combination of laser energy and water to provide gentler, more precise treatment that conserves healthy tooth structure, and minimizes pain and discomfort. In addition, procedures that once took several appointments to complete, such as multiple fillings, can now be finished in just one visit.

If you've been avoiding the dentist for fear of the needle and drill, or just want a dental solution that is faster and more comfortable, stop delaying your dental treatment and schedule an appointment today.

As always, thank you for trusting our practice with your oral health.

Sincerely,

Dr. Travon Holt
